**Abstract**

The system comprises a capturing device for capturing information regarding  
5 presence from the exterior, representative of an object included within a supervisory  
area, which operates in combination with means for detecting trajectories and means  
for detecting inclinations of said vehicle, associated and in cooperation with an  
electronic system. The method comprises using the proposed system to, by means of  
the generation of chart that relates the trajectory and/or inclination with a  
10 corresponding supervisory area to be covered by the capturing device, vary said  
supervisory area depending on the trajectory and/or inclination of the vehicle,  
through the selection and execution of the appropriate actions, by means of the  
electronic system, which will depend on the type of capturing device used.
